

Comparative

Alpha Tester Guide

Screenshots, links, and first-run walkthrough

Prepared June 17, 2026

Comparative is the internal AI workspace for chat, file work, reusable Skills, generated Apps, and alpha feedback.

Quick links

[Open Comparative](#)[Login](#)[Skills](#)[Apps](#)

Tester access

- Access is invite-only.
- Use the invite link from an admin or open the login link.
- Request a sign-in link for the exact email address that was invited.
- Use Feedback in the sidebar when something breaks or feels unclear.

STEP 1

Log In

- Open the alpha URL or your individual invite link.
- Enter the exact email address that was invited.
- Click Email me a sign-in link, then open the link from your inbox.
- If the link does not arrive, confirm the invited address with an admin and request a new link.
- After sign-in, Comparative opens the chat workspace at /chat.

Login link: <https://comparative.builtwithrobot.link/login>

Main workspace: <https://comparative.builtwithrobot.link/chat>

Invite links are per tester and look like /invite/<token>. Do not forward another tester's invite link.

STEP 2

First-Run Setup

- Name your assistant. The name appears in chat responses and can be changed later.
- Continue through a short tour of Chat, Artifacts, Skills, Apps, and Feedback.
- Every tour card points to a capability that is available now.
- Tool connections and profile questions do not block your first chat.

You can replay the capability tour from Settings at any time.

Walk through live capabilities

STEP 3

Use Chat For Real Work

- Type a request in the bottom composer.
- Attach PDFs, docs, spreadsheets, decks, screenshots, notes, HTML, or data files.
- Use the suggested prompts if you want a fast first test.
- Type / to find Skills available to your account.
- Use the sidebar to revisit recent chats, open Tools, Artifacts, Skills, Apps, Settings, or Feedback.

STEP 4

Artifacts And Apps

- When Comparative creates a file or small HTML tool, it appears as an artifact in the chat.
- Preview and download artifacts from the chat or the Artifacts panel.
- If an artifact looks reusable, use Deploy app to turn it into a signed-in workspace app.
- Open Apps to manage deployed tools and share them with teammates.

Artifacts live inside chat: <https://comparative.builtwithrobot.link/chat>

STEP 5

Connect Tools Deliberately

- Open Tools from the sidebar.
- GitHub is the live alpha integration.
- Microsoft 365, Salesforce, ServiceNow, SAP, Workfront, Databricks, Notion, and Google Calendar are visible as planned integrations.
- A connection controls what the assistant may access for your account.
- Disconnect or avoid connecting anything you do not want used in testing.

Find Work And Send Feedback

- Artifacts stores generated files and versions so you can reopen, preview, or download them later.
- Feedback sends a structured report to the admin inbox.
- Leave Include current chat context checked when the problem happened in a chat.
- Attach a screenshot when the issue is visual or hard to describe.

Good feedback includes what you tried, what happened, what you expected, and whether the issue blocks your test.

Feedback report modal

Alpha Test Checklist

- Log in with your invited GitHub account.
- Complete or skip first-run setup.
- Ask one real work question.
- Upload one safe test file and ask for a summary or transformation.
- Try one repeated workflow as a Skill from /skills.
- Ask for a small dashboard or page, then inspect the artifact.
- Open Tools and confirm what is connected.
- Send Feedback for one issue, confusing answer, or missing feature.

Please avoid pasting passwords, API keys, OAuth codes, or other credentials into chat. Use Feedback rather than screenshots in email when you need to report a product issue.
